

**World Water
Monitoring Day
in Varna
13. 12. 2008**

On 13th December 2008 nine students from Varna Secondary School of Economics „George St. Rakovsky“ participated in the WWMD event in Varna, Bulgaria. The group's guide was Mrs. Nelly Vicheva, biology and health education teacher in Varna High School of Economics „George St. Rakovsky“. The students conducted water quality of Black Sea Coast near one of the most popular Bulgarian resort „St. Konstantin and Elena“ near Varna. They selected this site, because it is a favourite place for tourists from all over the world during the summer, so we had to check is the water as clear as it has to be. 10 samples were collected from the students. The students had a really big problem - seaway, so they monitored only one water body. We understood that our Black Sea gives to all organisms good conditions for life.

Air Temperature	10°C
Water Temperature	9°C
Oxygen Dissolved	35 PPM
